

Here is the discussion forum for this part of the course. Please either post your comments/observations/questions or share your creations.

Let us suggest some topics of discussion:

SUGGESTED TOPICS

- How do you explain the wide variation between implementations among the different browsers? Safari and Microsoft have been lagging behind Google Chrome and FireFox on many other aspects of HTML5 implementation, but for multimedia they provide the best support available.
- Did you find any interesting tools on the Web for creating WebVTT tracks or making interactive video players? What option in the enhanced video and audio players, shown during the HTML5 part 1 course, would you like us to explain in this course?
