Here is the discussion forum for this part of the course. Please either post your comments/observations/questions or share your creations.

Let us suggest some topics of discussion and optional projects:

SUGGESTED TOPICS

- We presented improved video players in the examples, with clickable transcripts, buttons for choosing the subtitles, chapter menus, etc. Which example was your favourite?

- What other functionalities would you like us to cover in a future course? Small images in the progress bar? Bookmarks? Loop A/B for repeating a given part of a video/audio? Others?

OPTIONAL PROJECT

- Make an impressive video player with an attractive menu for choosing between different subtitle files and a nice chapter menu. Be creative! You can use the provided examples as starting points or do something on your own. Some suggestions: animated menu markers (CSS3 or animated GIFs, or small video clips), a nice popup menu for choosing the subtitles, a button for hiding/showing a transcript, etc.
